

Ladder Install Nextep FRP Products

Nextep FRP Ladder Installation

Ladders are factory assembled to full working length and then reduced in size to suit transport requirements.

The installation area must be assessed for best positioning of the ladder onto flat wall surfaces. The ladder has a four bolt fixing configuration on the top bracket. Coloured reflectors on the rungs follow International Safety Codes for Red/LHS and Green/RHS.

Fasteners should be:

- 316 stainless steel chemical bolts (12mm X 80mm) or
- 316 stainless steel sleeve anchor type bolts sealed with a chemical resistant epoxy.

This will ensure similar life expectancies from both ladder and fixing anchors.
